

Peace of mind.

DATA
STORAGE

Rest easy knowing your Disaster Recovery and Business Continuity issues are solved.

AGENT-LESS

One piece of software per location protects all the machines on the network. Unlike our competitors, who require an agent on every single computer they back up. In addition, all digitiliti updates happen automatically in the background.

MASSIVE DATA REDUCTION TECHNOLOGY (DRT)

DRT can reduce storage requirements by several magnitudes, in some cases, delivering in excess of 20X compression. DRT is designed to reduce data down to its raw essentials. Unlike traditional compression, which typically reduces data to half of its previous size.

NO HARDWARE OR SOFTWARE TO BUY

Digitiliti has no hidden hardware, software, or annual maintenance fees. You are charged a simple monthly fee based on the total number of compressed Gigabytes on the vault. Yes, you only pay for data stored at the Fortress Storage Center. You maintain complete control of your data and can accurately budget based on historical growth.

ADVANCED BACKUP ENGINE:

- > MASSIVE DATA REDUCTION
- > AGENT- LESS ARCHITECTURE
- > WIDE PLATFORM SUPPORT
- > DATABASE & MESSAGING SUPPORT
- > BARE METAL RESTORE
- > LOCAL BACKUP COPY
- > DATA ENCRYPTION
- > AUTOMATIC UPDATING
- > GUARANTEED RESTORE
- > SINGLE INTERFACE

ENCRYPTION

Digitiliti eliminates the costs, complexity and security issues associated with tape-based backups. Customers can choose from 8 to 256 bit encryption.

LOCAL RESTORE OPTION

With the Local Restore Option, a "snapshot" of all data being backed up to the Fortress Storage Center is stored locally on the network. In the event of a disaster, simply restore the latest snapshot.

FORTRESS STORAGE CENTER

This one of a kind facility was once home to the Federal Reserve Bank of Minneapolis. With direct fiber access, digitiliti has virtually unlimited connectivity to support any size data transfer. If you have a single site or thousands of sites we have the power and bandwidth to efficiently back up your company.

BARE METAL RESTORE

The bare metal restore capability allows administrators to quickly recover lost, damaged or corrupted data in a highly streamlined fashion to any bare metal system (at any location throughout the enterprise) without having to manually reinstall operating systems or configure hardware prior to use. Bare metal restore allows administrators to restore the complete system on new hardware – regardless of manufacturer – including local data, user profiles, registry/system state, service packs and encrypted files.

MORE THAN A "WINDOWS ONLY" SOLUTION

Digitiliti protects: Windows Servers and Machines, Unix, Linux, Netware, Macintosh, IBM, AS400 Mainframe, VMWARE, MS SQL, MS Exchange, ORACLE, GroupWise, Lotus, DB2. Don't see what you need? Call us.

24/7 SELF HEALING - IT IS ALL ABOUT THE RESTORE!

Digitiliti offers an automated method to verify the validity of all backup data. With self-healing technology we are able to guarantee customer data is fully protected and available for immediate online restoration. This feature solves the hidden corruption and data integrity issues that plague tape backups. With tape, you never know if your backup is corrupt until you try to restore data. No more tape - eliminates restore failures.
